Employment

Signal Noise
Front-end Developer
— April 2014 - Present

Worked on web applications for many clients. Used technologies that included Backbone, Laravel, Node.js and React. Structured responsive and cross-browser UI using SCSS (BEM) and CSS Modules.

Developed and maintained the redesigned Signal Noise website using Craft CMS (PHP/MySQL). Focused on improving the user experience for content creators.

Developed, maintained and deployed server instances on AWS. Worked on high profile conferences that took place globally. Made on site visits to give support.

Freelance
Full-stack Developer
— December 2014 - Feburary 2015

Programmed and animated wide range of interactive visualisations using HTML5 canvas and SVG.

Signal Noise
Intern Developer
— June 2013 - April 2014

Developed and maintained the Signal Noise website using WordPress and PHP. Helped improve SEO so that the site appeared higher in relevant searches.

Programmed and animated wide range of interactive visualisations using HTML5 canvas and SVG.

Programmed and animated wide range of interactive visualisations using HTML5 canvas and SVG.

Personal projects

Findbot

Finding specific project folders on my company server was hard. So I created a Slack bot for my colleagues to locate and open project folders. They use it all the time.

It's made up of micro-service-esque Python and Node.js apps. These handle indexing all the project folders with Elasticsearch and provide a conversational chat interface with Botkit.

Technical skills

Experience

JavaScript ES6 HTML CSS/SASS (BEM, CSS Modules) PHP Node.js MySQL

Libraries and frameworks

Backbone React/Redux jQuery Laravel Express Mocha

Tools
